# THE TRUTH ABOUT FIRE AND FLAMES

Most of us will agree that there's no smoke without fire. However, isn't there a difference between crying 'Fire!' and the sound of a softly crackling wood stove? In the daily environmental debate, we tend to react strongly to even the most logical statements. For instance, what pollutes most: heating a summer cottage with a wood-burning stove, frying bacon or lighting two candles on a cosy evening?

Most people would probably guess the stove, logically enough, since we can both see and smell the smoke.

Even if science tells us that a wood-burning stove filled with dry, certified wood only accounts for a few percent of particulate emissions in a home, and that all the rest comes from clothes, cooking, candles and various other ordinary things, it's easy to assume that a cosy stove or candles are luxuries that environmentally responsible people should avoid.

When it comes to the environment and health, the truth is often more nuanced than a Facebook post by a politician or an article by an interest group, and the only certainty is that the amount of particulates in an average home is made up of such a complex combination of things that in reality it's up to you what you choose to believe.\* At the same time, the number of products

we use and consume every day, and the importance we attach to them, varies from person to person. This is why we as a society need the guidelines that have been developed to identify the benefits and harmful effects of various kinds of products. One such measure is EcoDesign 2022 which is a European standard that will ensure all stoves installed after 1st January 2022 will meet a minimum efficiency and maximum permitted carbon emissions. In relation to this, the UK Stove Industry Alliance has backed this Standard with the introduction of the SIA EcoDesign Ready label. This voluntary scheme aims to promote modern stoves that already meet the stringent requirements of EcoDesign 2022. Morsø currently have over 50 SIA EcoDesign Ready models, and while we don't deny there's no smoke without fire, we'd still claim that the smoke from a home with a Morsø stove is cleaner than much of the air that fans the flames of the environmental debate.

In any case we can assure you, or any other responsible and environmentally conscious person, that with both the EcoDesign 2022 and the SIA EcoReady labels in hand, you are free to browse this catalogue and pick out any one of the 50 SIA EcoReady labelled stoves from Morsø with a clean conscience.

Enjoy!

\* In their fine print, companies often say that they cannot be held responsible in certain cases where one of their claims does not apply. In this case, it is here to assure you that we mean exactly what we write. In Denmark, 80% of all unhealthy particulates in the open air come from abroad. The remaining 20% are thought to be a mixture of exhaust emissions from diesel cars and smoke from wood-burning stoves. However, one might wonder whether, for example, industry (and much else besides) doesn't also play a small role in producing the last 20% (?). Humidity, wind and weather play a role too, and it is worth mentioning that firewood is considered carbon neutral, because wood binds carbon dioxide when it grows and releases the same amount again both when it burns and when it rots. Indoors, the story is just as complex, and the only thing everyone can completely agree on is that all the particulates from clothes, cooking, candles and stoves are academic if you smoke tobacco at home. Thankfully, that's up to the individual. Just as it is up to you to decide whether the heat from an eco-labelled wood-burning stove with clean wood is a plus or a minus in the overall environmental accounts.

# THE WARM FEELING OF HOME

---

In northern Europe, a relaxed and happy home is one of the most important things in life. Well entrenched in our comfortable homes we focus around the unique Danish term, hygge, a term which so many have tried to translate, hoping to recreate it somewhere else in the world. It has never really succeeded which is due in reality to one very simple reason. The term hygge cannot be defined because

it is a sense of wellbeing. Hygge is the name of a feeling and an atmosphere which is found in the very essence of our surroundings. It can be a smell, a warmth, a light in the dark or even the calmness in a crackling fire. Even the weather which so often returns us to the shelter of our homes, is a part of the thing we call Hygge. Hygge is a name. A cosy, inviting and safe name. Hygge is your home.

No past – no future. At the beginning of the 1930s, the sculptor, Constantin Sørensen, created this impressive radiant stove, featuring Morsø's well-known decoration of squirrel and oak leaves. Then, as today, the **Morsø 2B Classic** is in great demand, and with its almost stately appearance, the stove is perfect for patrician and farm style homes.

We have completely updated the combustion technology in the Morsø 2B Classic, so that it now meets today's stringent environmental requirements. There's almost no better way to have a fire than with the Morsø 2B Classic.

Retaining the well-known Morsø details and straightforward operation, **Morsø 1010** is a well known member of the family of small classic Morsø stoves. Naturally, the delightful atmosphere, that many of us remember as something quite unique from past campfires, will be provided by the large glass area. **Morsø 1010** is carried out entirely in sturdy cast iron – the best imaginable material for woodburning stoves. Combustionwise, Morsø 1010 meets the strictest Danish environmental standards.

A steady beating heart. **The Morsø 1400** is the quintessence of a charming stove. It represents what was the heart of many a home, what we know and remember from our childhood. The combustion technology of these classic stoves have since then been further developed and improved so that harmful particles and surplus gases are burnt off. That's why, today, the stoves fulfil the strictest environmental requirements and also bear the Nordic Swan Eco-label. Despite all improvements in technology there are some details which remain timeless and a sign of quality, so Morsø's characteristic squirrel can still be found on the sides. It also available with contemporary ribbed sides.

The **Morsø 6100-series** fans the flames. The stove's unique combustion system helps ensure a higher temperature in the combustion chamber, which means it burns off the flue gases. This provides you with a cleaner and more environmentally-friendly combustion and a higher level of efficiency, guaranteeing you good fuel economy. Furthermore, the elegantly designed glass door and hidden mountings provide a good view of the fire and flames. The Morsø 6100-series are 80.1% net efficient with almost no smoke emissions.

**Morsø 7400-series** takes the best qualities of modern wood burning stoves and uses them to give the consumer a modern take on a classic design. At the same time the series celebrates Morso's 160th anniversary and, for the first time presents the newly redesigned "Squirrel" motif. This motif decorates the matt black side of the stove and emphasizes the quality finish whilst celebrating our 160 year history as the leading manufacturer of high quality wood burning stoves.

The Morsø S11 range is the epitome of simple, timeless design. When designing the stove, we attached a great deal of importance to creating an expression with exciting contrasts. Tight lines and soft curves. The steel's minimalistic and light expressions serve as the perfect counterbalance to the stove's large glass door, which affords a generous view of the beautiful and warming flames. The S11 stoves make up a well-designed and inspired range within the category for low heating requirements.

An original wood-burning stove & the joys of a crackling fire Morso is adding yet another great product to its extensive range of wood burning stoves, the **Morsø 5660** insert. Continuing the Morsø heritage, the 5660 is manufactured in high grade cast iron; a strong, durable material particularly well-suited for freestanding stoves and especially wood burning inserts. Creating comfort and cosiness in any home The Morsø 5660 insert is probably the cleanest and most modern appliance in its class. The natural, vivid texture of the cast iron surface makes for a rustic yet elegant appearance. Relative to its size, the 5660 insert has a large 'air-washed' window, that provides beautiful unbroken view of the dancing flames within. The simple design of the 5660 insert will create comfort and cosiness in any home.

**Morsø S101 series** are advanced inset fireboxes, that both meets the strictest environmental requirements and reflects our strong traditions of workmanship.

The built in fireplaces distribute the heat efficiently throughout the room and leads to truly comfortable warmth. We all remember open fireplaces, but they have the unfortunate disadvantage that, just like a camp fire, they cause radiation in front and draughts behind. We avoid this by using a firebox, as the convection air in the stove mixes with the air in the room and distributes the heat. This gives the greatest possible comfort near the fireplace.

All **Morsø S120 - S122** inserts have a through wall firebox with glass on both sides, allowing the flames, fire and warmth to be enjoyed in two separate areas at the same time.

The wide format of the stove will spread comfort through any home. The built in fireplace fits in perfectly with stylish furnishings, and the aesthetic effect of the flames inspires thoughts of a beautiful painting or a modern flat screen TV.

The Morsø 120 tunnel inset fireplace can be supplied either with a folding door, which gives a fantastic view of the flames (S120-21) or with a frictionless guillotine door. (S120-22)

*Morsø S120-21*  
Item-no.: 65753921

## S140 /S160

*Morsø S140-41\**  
corner with hinged door  
Item-no.: 65754421

*Morsø S140-42\**  
corner with sliding door  
Item-no.: 65754521

*Morsø S160-32\**  
three-sided with sliding door  
Item-no.: 65755821

*Morsø S161-32\**  
three-sided with sliding door  
Item-no.: 65755921

Enjoy the fire and the dancing flames in an entirely new way! With its uninterrupted, 3-sided glazing, the **Morsø S-160-32** is the closest you can get to an invisible stove - visually an open fireplace.

The large continuous glass door gives a 3-dimensional and unhindered view of the fire. Morsø S160-32 opens up entirely new options for room layouts and stands out as a central feature of the house, leading to an exceptional class of exclusivity.

The inset is supplied with a frictionless rise-and-fall door closer that elegantly disappears behind the wall.

## ENVIRONMENTALLY FRIENDLY COMBUSTION

The cross-section of the stove shown above outlines the stove's combustion and convection airflow system. Cold air is drawn into the stove and heated as it passes through the cast iron channels (the heated air washes the glass keeping it clean, clear and free from soot). The hot air also provides perfectly heated combustion air (in addition the heated tertiary air aids secondary combustion of any smoke and gasses, increasing efficiency and reducing the environmental impact).

We're hot for fire. One of our most important areas of expertise is the production of environmentally-aware stoves, and we happily describe ourselves as experts in combustion technology.

---

In 1853 the young N.A Christensen left his job as an accountant to start an adventure involving an iron foundry. An adventure which started in a factory building in Nykøbing Mors. Despite tough competition from the foundries in the larger cities, it would turn out that a small collection of smiths, lathe and wood workers, created an icon which managed to reach far beyond the city it was created in. An icon created through innovation, built on design, quality and of great craftsmanship, and which therefore always stand comfortably in any home whether in Denmark or abroad. An icon we all know as Morsø.
